## Dandelion weeder ash T-handle 400mm

Removing dandelion with this large corkscrew is quite easy. You screw the weeder around the dandelion root in the ground and then pull it upwards. This version has a handy 40cm handle, we also make them with a long 80cm handle. Remove all your dandelions from your lawn in time so that they do not keep coming back. Once they are in bloom, there is a high risk that many more will grow. Weeding dandelion is the best thing for your lawn.

### Specificaties
