Heartshaped handhoe ash P-handle

The Dutch are used to their push and pull weeder.

This handweeder is also used for weeding borders and raised beds. You place the blade on the dirt in the border with a small angle so the blade is pushed below the surface. By pushing it from you and pulling it towards you the dirt is loosened and the roots of the weeds are cut. Because of the roots that have been cut the weed will not grow anymore and the energy goes straight to your plants again.

The **P grip** is designed for people who are suffering **arthritis**. You don't have to give up gardening, with the P grip tools you can use both hands!
