## DeWit® Sieve trowel with drop grip handle

We've designed this trowel for ergonomic reason, by cutting parts of the blade it's less weight and still a heavy duty tool for your garden. During our research we've learned that it's a great tool to mix you soil in the border with fertilizer when you are planting. If you are planting in dry soil it's also great to mix water trough the soil so you make the best place to put your plants. Made from Boron steel and comes with an ash drop grip handle.
